

ARTEMIS LIGHT THERAPY MASK

Please circle the light color you would like to use:

- **RED LIGHT THERAPY:** Studies have shown it reduces fine lines and wrinkles. In addition to this, the body produces more collagen and elastin equating to healthier and younger looking skin. It can also improve overall facial texture and reduce scarring. Red Light is absorbed by cytochrome c oxidase in mitochondria and increases blood flow, leads to brain repair and enhances brain optimism. Red Light Therapy increases energy and reduces inflammation.
- **BLUE LIGHT THERAPY:** Is used primarily to kill bacteria that causes acne. It's also been shown to help with those who have psoriasis and reduce sun damage. This is a favorite for those who have been struggling with acne and have a hard time with ingredient based solutions.
- **GREEN LIGHT THERAPY:** Is for reducing dark spots as well as balancing out skin levels for those with oily skin. Studies have shown it aids with hyperpigmentation and reducing inflammation. However, it's most commonly known for reducing bags under eyes.
- **YELLOW LIGHT THERAPY:** Is used for calming inflammation and reducing redness. Studies have shown it's a great option for users specifically looking to reduce the redness caused from the sun. It also boosts lymphatic flow which helps remove toxins and increases skin hydration/circulation.
- **CYAN LIGHT THERAPY:** Is used for reducing swollen capillaries as well as inflammation. Studies have shown it has also been used to treat mild forms of acne.
- **VIOLET LIGHT THERAPY:** Is simply a combination of red and blue light therapy together. It shares both benefits of each at the same time.

Light therapy is easy and safe with few side effects.

Here are some but not all of the risks of LED light therapy:

- Increased inflammation
- Rash
- Redness
- Pain
- Possibility for skin cancer development later in life
- Eye strain
- Temporary headaches
